Summary

- Working as an engineering problem solver for 7 years now. Leading software development team of 10-15 members for multiple products as engineering lead for 3 years.
- Successfully drove and built 3 medium to the large scale systems from scratch that can adapt to variable load with the minimum cost from cloud service providers.
- Actively working on Golang, Node.js & RoR on the back end, and React.js on the front end. Extensively using Amazon Web Services (AWS).
- Responsible for functional requirement feasibility analysis, technical analysis & story breakdown, system design and software architecture and cloud infrastructure decisions, deployment of feature to production, and providing active production support.
- As part of the engineering leadership role, my responsibility includes maintaining a positive culture that inspires teamwork and anticipating any delay/change in the delivery timeline and has a smooth communication pipeline with relevant people.
